**TTY 1-888-232-6348**

Definition	Treatment
Signs and Symptoms	Role of the School Nurse
Transmission	Exclusion/Reporting
Diagnosis	Resources

### **Definition**

Cyclosporiasis is caused by a parasite called *Cyclospora cayetanensis*. It infects the small intestine after being consumed in food or water that has been contaminated by infected stool.

### **Signs and symptoms**

Symptoms include watery diarrhea with frequent, sometimes explosive, bowel movements. Other symptoms may include loss of appetite, weight loss, bloating, gas, stomach cramps, nausea, vomiting, fever, and fatigue.

### **Transmission**

Cyclosporiasis is often found in tropical or subtropical regions, however it has recently become more common in the United States. Transmission occurs through consuming food or water that has been contaminated with infected stool. This often occurs when fresh produce, such as fruit or vegetables, are not properly washed before eating. Cyclosporiasis is not found in commercially frozen or canned produce due to the processes involved and is generally not spread person-to-person.

### **Diagnosis**

If symptoms are noted, the child should be referred to his or her healthcare provider. Cyclosporiasis is diagnosed by clinical symptoms and laboratory tests.

### **Treatment Recommendations**

- Treatment consists of antibiotics, taken for 7-10 days
- Non-specific supportive therapy, including hydration, is important

### **Role of the School Nurse**

### **Prevention**

- Provide education on good food safety practices
- Provide education to students and staff regarding good hand washing with soap and water
- Promote washing of fresh fruit and vegetables before eating

### **Exclusions**

- Exclude symptomatic students and staff from school and school trips, especially swimming, until diarrhea resolves
- Educational modifications may be warranted in children with a positive diagnosis
- See Maine Food Code for exclusions for staff who handle food (see resources)

## Reporting Requirements

- Cyclosporiasis is a nationally notifiable infectious disease. 1-800-232-4636  
TTY 1-888-232-6348
- Cyclosporiasis is currently not a reportable infectious disease in Maine but may be reported as an “unusual disease”.
